Pedal Planes

Here are the details about where you can get information and plans for the pedal planes that we had on display.

The Company in the United States where we bought the plans from is called Aviation Products Inc.
http://www.lightsportaircraftpilot.com/EAA_airventure_2008/1.html

or web site <http://www.pedalplanekits.com/>

The contact is Gary Sampson pedalplanes@gmail.com

AVIATION PRODUCTS, INC, P.O. BOX 8303, CEDAR RAPIDS, IA 52408

He is only available evenings in the US central time zone... at +001-319-393-5256 ..which is also his fax number for orders...

Plan packages, postage included, are, US \$25.75, Canada \$32.95 and overseas \$36.95.all in US Dollars. Iowa residents add 7 % sales tax..

We bought 2 sets of plans (a Tiger Moth and a Harvard) for \$20 each plus \$11 shipping, and I believe if you only want 1 set of plans it will cost you \$31 including shipping, but please check with Gary first, as his costs may have changed. I called Gary and paid the \$51 by credit card on the phone.

Here are two URL's that you can look at, which shows the work involved and gives some good tips, for the Tiger Moth and P-51 Mustang pedal planes;

A page from a Canadian who describes a Tiger Moth plane which he built in Dec 2007,
<http://www.hcpconsulting.ca/tigermoth/tigermoth.htm>

and a P51 plane with lots of construction views in case you decide on making that aircraft instead:-
<http://www.hcpconsulting.ca/p51/p51.htm>

They take a bit of work, but the end result is worth it.

EAA Pedal plane page - <http://www.eaa1000.av.org/related/pedplane/pedplane.htm>

Aircraft Spruce - <http://www.aircraftspruce.com/menus/ps/pedalplanes.html>

they do plans, and even a kit for a Biplane with rocker - beats a rocking horse!

Finally we think there is still a company in London that makes pedal planes.
contact details we have are;

The Wood Store (incorporating London Pedal Aeroplane Co.), 103 Camley Street, London NW1 0PF, Tel 020 7380 1221, or e-mail orange@aol.com

who make these for around £300 or so, and that might be a better option than the self-build option, but a lot less fun!!!!. We hope this is of help, and good luck with the builds.

Or try some classic pedal planes from;

http://www.classic-pedalcars.co.uk/Pedal_car_Range.html

If you find any more suppliers then please let me know and I'll add them to this list.

Many Thanks Andre (andre.faehndrich@ntlworld.com)
